The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. Squence 288, Application US/09925300

Patent No. US20020151681A1

GENERAL INFORMATION:
APPLICANT: Craig Rosen,
TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
FILE REFERENCE: PAIO1
CURRENT APPLICATION NUMBER: US/09/925,300

CURRENT APPLICATION NUMBER: US/09/925,300

PRIOR APPLICATION NUMBER: 60/124,270

PRIOR PILING DATE: 2000-03-08

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 1890

SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAACCATTGTCCCACAATG 1461

1 Sequence 5, Application US/09724224

2 Patent No. 6387644

3 GENERAL INFORMATION:

3 APPLICANT: Bereaud, Christophe

3 TITLE OF INVENTION: No. 6387644el motor proteins and methods for

4 TITLE OF INVENTION: their use

5 TITLE OF INVENTION WIMBER: US/09/724,224

5 CURRENT FILING DATE: 2000-11-28

6 PRIOR APPLICATION NUMBER: 09/597,292

7 PRIOR APPLICATION NUMBER: 09/597,292

7 PRIOR FILING DATE: 2000-6-20

7 NUMBER OF SEQ ID NOS: 8

7 SOFTWARE: FastSEQ for Windows Version 4.0

7 SEQ ID NO 5

1 LENGTH: 1041

7 TYPE: DNA

7 OKGANISM: Human
